

SIOM ARES

ADAPTIVE REAL-TIME EXECUTIVE SHIELD

The most advanced operational technology ever applied to executive protection.

AI-powered, full-cycle, built from the inside of the problem.

Every operation. One screen.

ARES gives command complete visibility across all concurrent deployments, in real time.

01 — Automated Mission Prep

AUTOMATED MISSION PREP · PROCESSING ●

EMAIL 3 files

✉ Hotel confirmation · Itinerary · Protocol brief

WHATSAPP 4 threads

■ Advance team · Local contacts · Driver

VOICE NOTES 3 notes

■ Venue debrief · Route assessment · Site conditions

PHOTOS · DOCS 12 files

■ Floor plans · Access points · Entry photos · Maps

Compiling intelligence **100%**

MISSION REPORT READY

■ New Delhi · All sources merged · 24 pages

ARES reads every source — emails, schedules, voice notes, attachments — and builds your complete operational package automatically. Prep that took a team days of manual compilation happens in minutes.

02 — Command on the Terrain

FIELD INTEL · NEW DELHI · LIVE ●

● 08:00 ✓ On schedule

Depart Oberoi Hotel

● 10:00 - Now ● In progress

Plenary Session · Hall 5

● 12:15 → 13:00 ■ Delayed +45 min

Bilateral · PM Office

● 15:30 Route A · Confirmed

Return · Oberoi Hotel

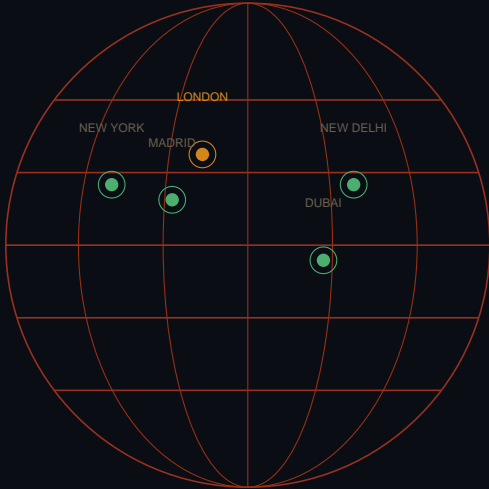

BHARAT MANDAPAM

3 OPERATORS · CONVERGING

Every venue, every route, every entry point — mapped, geolocated and shared the moment the advance team captures it. One change propagates to every operator instantly.

03 — Live Global Picture

5 ACTIVE · COMMAND

5 ACTIVE 4 NOMINAL 1 ATTENTION 23 OPERATORS

CEO: How's the Dubai operation?

ARES ■ Dubai — Venue delayed 40 min. DELTA-4 holding. Route B pre-cleared.

CEO: Any other operations needing attention?

ARES All other 4 operations nominal. London motorcade on schedule. No gaps.

Every operation your firm is running — on one screen, in real time. The CEO view that required constant calls becomes one screen.

04 — Institutional Memory

KNOWLEDGE BASE · LIVE

■ New Delhi — Bharat Mandapam

- Last deployment Feb 2026 · All intel current ✓
- South Gate primary · East blocked · Mapped ✓
- Ready for next deployment · Zero start from scratch ✓

Every contact, route, venue assessment and threat observation captured permanently. The platform becomes more valuable after every deployment.

Not incremental improvement.

A structural advantage.

01

SCALE WITHOUT DEGRADATION

7 → 20 ops

Seven operations become twenty. Quality doesn't change. No longer depends on whether the CEO has the capacity to check in.

02

INSTITUTIONAL INTEL

Compounds

Every operation becomes capital. ARES turns every deployment into intelligence — venues, routes, contacts, threat patterns — compounding with each mission.

03

COMMERCIAL EDGE

First mover

No competitor currently offers principals a live, curated view of their own operation. This changes the commercial conversation and becomes a reason to stay.

04

OPERATIONAL QUALITY

Consistent

Every operator executes to the same standard. Every time. Workflow-guided processes elevate the baseline of every team member. Quality becomes institutional.

05

DECISION SPEED

Real-time

The decision-maker with the full operational picture in real time makes a better decision faster than the one waiting for a phone call. Every time.

06

COORDINATION

Instant sync

One change propagates instantly to every operator on every detail. Field and Command never work from different information at the same moment.

07

OBSERVABILITY

One screen

The CEO view that currently requires constant calls and check-ins becomes one screen. Attention directed only where it is genuinely needed.

A multi-principal summit deployment.

Multiple principals. Simultaneous operations. Constant programme changes. This is high-level summit protection.

WHEN	EVENT	WITHOUT SIOM ARES	WITH SIOM ARES
Day 1	Pre-Advance begins	Separate email threads. No source of truth.	All comms auto-structured. Every team aligned.
Day 2	Venue recce	Notebook and camera roll. Notes from memory.	Every entry point geolocated, shared instantly.
Day 3 AM	Road closure intel	Manual request. Two hours late. Relayed by hand.	Filed under Route Intel. All teams updated instantly.
Day 4 PM	Programme change	Chain of calls. Some operators miss the update.	All operators notified simultaneously. No calls.
Day 4 PM	Vehicle in traffic	Driver calls leader. Verbal ETA. No visibility.	Live position on COP. Principal: 'Delayed — 16:20.'
Day 5 AM	All ops go live	CEO blind. Status only through direct calls.	All ops on one screen. Six green, one amber.
Day 5 AM	Venue access confusion	Wrong gates. Fifteen minutes of chaos.	Gate-by-gate access mapped. Every operator briefed.
Day 5	Debrief	Verbal if time allows. Intelligence largely lost.	Complete record. Venue intel updated for next time.

The right question is not what it costs.

In the sector you operate in, protecting the principals you protect, the question that matters is not the cost of the platform. The question is what one avoidable failure costs. In reputation. In client relationships built over years. In the ultimate consequence that no firm in this sector can afford to contemplate.

The cost of infrastructure

Fixed. Known. Predictable. A line in the operational budget of a firm billing at this level.

The cost of a reputational failure

The loss of a principal relationship worth years of retained revenue. Incalculable, and permanent.

The cost of an operational failure

In this sector, at this level, the consequence of the wrong decision at the wrong moment is not a line in a report. It is a life.

The asymmetry is total. The question answers itself.

ABOUT SIOM

Built from the inside.

"This is not a technology company that has studied the executive protection industry. It is a team that has operated at its highest level and is now building the infrastructure that level of operation deserves."
